Figure. (A)-(D) Detailed activation map of the gap related reentry which indicated macro-reentry between gaps of roof line and bottom line. Two separate gaps at roof line and gap at mid portion of bottom line were observed. (E), (F) A single acquired activation map during AT also revealed conduction gaps at anterior RIPV, LSPV ridge and LIPV bottom. (G) A schema of conduction gaps along the isolation line in all patients. The numbers indicate the number of patients who had conduction gap in each region.
