Increased Effective Pacing Is Associated with Improved Survival in Cardiac Resynchronization Therapy Patients

Figure 1: Total Survival by %eCRT Subgroups

- Total Survival (%)
- Months Since Implant
- eVP_itt_b
- eCRT <95%
- eCRT >=95%
- HR = 0.46 (0.27-0.79)
- log-rank p = 0.0038

No. at Risk
- eCRT <95% 385 299 236 163 112
- eCRT >=95% 822 630 498 359 245
