**Figures**

**Figure 1:** 12 Lead electrocardiogram at the time of presentation shows a long RP, narrow QRS tachycardia at the rate of 188 bpm.

**Figure 2:**

- **a:** RF ablation at the mitral annular site with earliest activation resulted in tachycardia termination within 10sec.
- **b** Fluoroscopic image from the successful RF ablation site. The image shows quadripolar catheter in HRA, decapolar catheter in CS and the ablation catheter at the mitral annulus.
