Figure. Ablation and mapping in a case of AFL with post-op CHD Using CARTO electro-anatomy system. A) Right atrium in RAO. The red dots represent ablation lesions and the gray dots represent scar in CHD post-op. The yellow arrow shows the linear ablation of CTI and the white arrow shows the linear ablation of the bottom of scar to the inferior vena cava; B) Right atrium in LAO. The red dots represent ablation lesions and the gray dots represent scar in CHD post-op; C) ECG shows AFL with 2:1 conduction. The black arrow shows the normal atrium potentials; D) ECG shows AFL with 2:1 conduction. The black arrow shows the atrium scar potentials (fragmented and low-voltage waves).
